

Andrew Deal

SOFTWARE ENGINEERING GENERALIST

Mountain View, CA | 415 200 9584 | deal.e.andrew@gmail.com | linkedin.com/in/adeal | andrewdeal.info

PROFILE

Product-minded software engineer who turns ambiguous workflows into reliable tools. Experience spans full-stack product systems, identity at consumer scale, autonomous machinery, early-stage hardtech, and independently built applied-AI products.

TECHNICAL RANGE

Languages and frameworks: TypeScript, JavaScript, Python, SQL, React, Node.js, FastAPI **Systems:** AWS, Docker, APIs, data pipelines, CI/CD, experimentation, observability **AI and product:** LLM orchestration, agent tooling, model evaluation, UX research, product strategy, operator workflows

EXPERIENCE

Independent Product and Engineering Feb 2026 to present

Baseline Health, Founder and Product Engineer (Feb to May 2026) | Independent Engineer, Physical AI (May 2026 to present)

- Built an AI-native health-intelligence product solo across React, TypeScript, Python, FastAPI, wearable and lab ingestion, LLM orchestration, longitudinal scoring, and deterministic audit paths.
- Trained a 52-million-parameter ACT policy on 206 PushT episodes and built a fixed-seed rollout evaluation with reproducible videos, metrics, and failure analysis.
- Brought up a SO-ARM101 leader and follower system through device routing, camera integration, and read-only communication with all six follower servos.

Selected Hardtech Product Leadership Jan 2024 to Jan 2026

Pixel Foundry, Principal | OmenAI, Platform and Product Lead | TurbineOne, Lead Product Manager

- Led and advised work across defense, construction, mining, AgTech, predictive maintenance, and edge ML without reliable cloud connectivity.
- Translated operator needs, sensor data, and field constraints into diagnostic surfaces, model priorities, product strategy, and customer workflows.

Bear Flag Robotics, acquired by John Deere Feb 2020 to Mar 2023

Senior Software Engineer | Product and Technical Lead

- Co-led the full-stack platform supporting more than 80,000 autonomously tilled acres and more than \$1 million in gross revenue across major enterprise farms.
- Built software and product workflows for autonomous field operations, customer visibility, and day and night deployment windows.
- Coordinated customer, autonomy, tractor-engineering, and field-operations teams across Bear Flag and John Deere; helped shape a \$39 million electrification and autonomy program.
- Helped grow the web engineering organization from its initial team to 15 contributors through hiring, standards, and engineering practices.

Over, acquired by GoDaddy May 2019 to Oct 2019

Senior Software Engineer

- Led web delivery for Over Teams, helped bring the enterprise product to parity with iOS, and established frontend architecture and engineering standards.

Twitch May 2016 to Oct 2017

Software Engineer, Identity

- Built OpenID Connect federation, username changes, registration experiments, and authentication-latency improvements in multi-team rollouts affecting more than 10 million daily active users.

EDUCATION AND DEVELOPMENT

George Mason University

BA, Philosophy, 2012

University of Oxford

Logic Systems coursework, 2011

Reforge

Product Strategy and Product-Led Growth, 2022
