

Andrew Deal

Senior Software Engineer | Product & Deployment Systems

Mountain View, CA | 415 200 9584 | deal.e.andrew@gmail.com
andrewdeal.info | linkedin.com/in/adeal | github.com/a-deal

Senior software engineer combining hands-on implementation, customer discovery and product judgment. Co-led Bear Flag's web platform supporting **80,000+ autonomously tilled acres and \$1M+ in gross revenue**; earlier implemented identity systems affecting **10M+ daily users at Twitch**. Experience across industrial software, enterprise pilots and independent AI evaluation systems.

TECHNICAL SKILLS

Languages & applications: Python, TypeScript, JavaScript, SQL, React, Node.js, FastAPI

Systems & AI: AWS, Docker, APIs, ETL pipelines, CI/CD, observability, model evaluation, LLM orchestration

EXPERIENCE

Pixel Foundry

Mar 2023 to present

Software Engineering & Product Consulting

Selected consulting engagements, embedded operating roles and independent engineering.

- Reduced business operating costs by **10%** through software implementation for an agricultural drone company specializing in biological pest control.
- Architected and built **three software systems at OmenAI** spanning ETL pipelines, sensor interfaces and legacy-data integration for industrial condition monitoring; partnered with embedded and hardware engineers toward the first production build.
- Led customer engagement on **million-dollar pilots with United Rentals and CAT Carolina** at OmenAI, including deployment strategy for United Rentals' **planned 40-sensor pilot**.
- Developed product strategy for an agricultural supply-chain business focused on converting surplus produce into wholesale inputs for consumer packaged goods companies.
- At **TurbineOne**, worked with engineering and UX to organize customer feedback and inform roadmap priorities for a defense platform combining sensor fusion and machine learning at the edge.
- Architected and built an independent robot-learning evaluation system with reproducible experiments, videos, metrics and failure reports; integrated hardware, cameras, calibration and teleoperation.

Bear Flag Robotics / John Deere

Feb 2020 to Mar 2023

Senior Software Engineer, Feb 2020 to Mar 2021 | **Product and Technical Lead**, Mar 2021 to Mar 2023

Acquired by John Deere in Aug 2021; continued within Deere's autonomy organization.

- Co-led the web platform supporting **80,000+ autonomously tilled acres and \$1M+ gross revenue**. Architected full-stack systems for field operations, customer visibility and operator workflows across day and night deployments.
- Translated customer evidence from California farms into product and technical priorities, coordinating autonomy, tractor engineering and field operations.
- **Spearheaded Carver**, a post-acquisition electrification and autonomy initiative for high-value crops. Worked with Bear Flag's CEO and COO and Deere engineering teams to turn customer research into an autonomy roadmap for a new agricultural market.

Over | Acquired by GoDaddy

May to Oct 2019

Senior Software Engineer

Contributed to **threefold enterprise-account growth** while leading web delivery for Over Teams. Helped bring the product to parity with iOS and established frontend architecture and engineering standards.

Twitch

May 2016 to Oct 2017

Software Engineer, Identity

Led multi-team identity-system rollouts affecting **10M+ daily active users**. Implemented OpenID Connect federation, username changes, authentication-latency improvements and registration experiments.

EDUCATION & PROFESSIONAL DEVELOPMENT

George Mason University: BA, Philosophy, 2012

University of Oxford: Distinguished Exchange Student Program, 2010 to 2011; Modern Philosophy, Logic, and Logic Systems

Reforge: Product Strategy and Product-Led Growth, 2022
